PROFESSIONAL SUMMARY

Computer Science & AI undergraduate with hands-on experience in data analysis, visualization, and deriving actionable business insights from complex datasets. Skilled in Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, and Google Sheets. Contributed to end-to-end analytical workflows covering data cleaning, EDA, KPI development, risk segmentation, and interactive dashboard design. Adept at translating raw data into clear, decision-ready insights for real-world business problems.

EDUCATION

Bachelor of Technology (Artificial Intelligence) 2024 – 2028

Newton School of Technology, Rishihood University | Grade: 7.5 / 10.0

Intermediate (Class XII) 2023 – 2024

DAV Centenary Public School | Grade: 73.0%

Matriculation (Class X) 2021 – 2022

DAV Centenary Public School | Grade: 92.0%

TECHNICAL SKILLS

Languages: Python, SQL

Libraries: Pandas, NumPy, Matplotlib, Seaborn

Tools: Excel, Google Sheets

Visualization: Tableau, Recharts

Core Competencies: Data Cleaning, EDA, KPI Development, Risk Segmentation, Dashboard Design, Pivot Tables

PROJECTS

Loan Default Risk Analysis & Applicant Risk Segmentation

Feb 2026

Google Sheets, EDA | [GitHub](#)

- Led end-to-end data analysis on 14,699 consumer loan applications in the banking sector, serving as Analysis Lead responsible for data cleaning, feature engineering, EDA, and KPI development.
- Engineered derived variables including Default_Flag, DTI_Risk_Category, Income_Bracket, Loan_Size_Category, Risk_Score, and Overall_Risk_Category to power a structured 3-tier risk segmentation model (Low / Medium / High).
- Identified credit grade, debt-to-income ratio (DTI), and annual income as the three primary default predictors — borrowers in grades E–G defaulted at 27–42% vs. 4.24% for grade A; DTI >35% correlated with 3× higher default rates.
- Built a KPI framework covering overall default rate (14.88%), average loan amount (\$15,023), average DTI (18.82%), and high-risk applicant share (~22%), revealing that 22% of borrowers account for 50%+ of total defaults.
- Designed an interactive Google Sheets dashboard with dynamic slicers, COUNTIFS/AVERAGEIFS-powered pivot tables, and conditional formatting for executive-level real-time portfolio monitoring.
- Delivered actionable recommendations projected to reduce default rate from 14.88% to ~9–10%, representing approximately \$7.1M in savings through targeted approval controls.

Swiggy Restaurant Analysis Dashboard

Apr 2026

Python, Tableau | [GitHub](#)

- Collaborated on analysis of Swiggy restaurant listings across 6 Indian metro cities to identify cuisine performance gaps and market opportunities.
- Performed EDA in Python (Pandas, Matplotlib, Seaborn) to explore cuisine popularity, price-band distribution, and rating trends by city.
- Contributed to KPI-driven Tableau dashboards covering cuisine rating analysis, city demand benchmarking, and price-band performance to support data-backed investment decisions.
- Derived insights on high-demand but underserved cuisine segments across metro markets to guide strategic restaurant expansion recommendations.
